

# Introducing Embrace

Keep pace with – or even better, stay a step ahead of your fast-evolving resident, caregiver and administrative demands

The pandemic has cast a long shadow over the senior living and senior care sector. Yet it is also being credited as a catalyst for technology adoption and healthcare innovation. In the past, certain technologies or platforms that were seen as more of a choice or a luxury, have become requirements to help staff and residents navigate through the pandemic and beyond.

Social isolation of residents, workforce solutions and utilization, compliance, and service delivery have seen increased technology adoption. COVID19- exposed vulnerabilities in the sector that can be addressed through technology solutions such as ours. Government supported reimbursement has accelerated technology adoption in several key areas such as contactless Fall Detection, Vital Sign Monitoring, Remote Patient Management and Tele-Health.

**Embrace™ is designed to enhance and empower the lives of seniors and their caregivers in Assisted Living Facilities, while providing peace of mind for loved ones and caregivers. Our innovative low-cost, low complexity approach goes a long way towards resolving real life problems that both seniors and their caregivers face on a daily basis. We have integrated cutting-edge technologies and advanced 4D Radar detection to create a high value user experience for all stakeholders, whilst proudly boasting no cameras, listening devices or wearables. Seniors can feel free, independent and comfortable in any environment.**

Remote Resident and Environmental Monitoring, Predictive analytics and artificial intelligence make it very effective for facility operators to identify potential issues and reduce adverse situations. Our 4D Radar based sensor solutions can monitor falls and automatically connect with assistance.

## The Revolutionary Intelligent Sensors

Our 4D radar sensors are reliable, well-tested, intelligent devices that together with our WarmSense technology, perform well under many various conditions. We are able to utilize these sensors to reliably monitor, measure and detect abnormal events in any facility.

				
4D Radar Sensors that are hyper accurate and non-intrusive	Sensing Falls and Presence of Multiple People in the area	Monitoring a large room and all the activities within it	Measuring how long a person has been in the room	With no cameras in place, Privacy is strictly guaranteed

An immediate high-priority alert directly notifies your staff, care givers or emergency units, to ensure seniors get the help they need when they need it.
