Lifestyle Solutions

**SERVICED TECHNOLOGY  
THAT PROMOTES GREATER  
LIFESTYLE CHOICES AND  
LIVING IN PLACE**

---

## ● Our Story

The TLS journey began two years ago when it became clear that providing positive care for seniors was becoming more and more challenging in a modern world. Shortfalls in the system were apparent whether seniors were living independently at home or in any of the residential care formats. Technology was not playing an active part in allowing seniors access to independent living or aging in place.

## ● Innovation and Technology

We therefore devised an approach which sought to 'innovate, close the gaps and leverage technology within this field. We initiated some systemic lifestyle enhancements so that all seniors can live a more independent, communicative and vibrant lifestyle, whilst simultaneously allowing remote and residential primary caregivers, a more supportive insight as to the routines, well-being and security of their loved ones. We have achieved this notion through the development of a strong software interface that is easy to install, with uncomplicated hardware that has been designed with ease of use and simplicity in mind.

This intervention needed to be managed very judiciously. The essence of 'Support' and 'Privacy' needed to be carefully balanced so as not to be viewed as intrusive. Therefore, our solution provides a perfect balance between discretion and collaboration. Everyone in the relationship benefits and more importantly, both seniors and caregivers become empowered and feel safer.

The devastating effects of COVID - 19 have clearly shown us that our seniors are exposed to many elevated risk factors that need to be mitigated with some urgency. Therefore, our applications, Smart Hub and eco system of hardware has been designed and integrated to help alleviate these issues and provide unintrusive monitoring for all concerned.

---

## ● The Solution

---

TLS Solutions has been built with everyone in mind. For the senior audience, our devices are user friendly. For care givers and other family members, our mechanisms offer an elevated sense of control which is obtained via real time monitoring and reporting. The systems reduce the negative effects caused by isolation and daily concerns for both parties. Another key feature is the 'Family Tree' which provides a great communications platform for up to ten members. Good communication is key, and our equipment makes it easy for many people to be involved in the ultimate care of a Senior.

## ● Lifestyle and Interaction

Our attention was also drawn to the lack of lifestyle content that is available to seniors. Therefore, we also deliver a full set of products through our communications tablet that will enrich the life of the senior. Topics like 'Health and Well Being, and Culinary Creativity' will be addressed. Our resident chef will provide daily meal suggestions and our medical doctor will watch the calories and promote 'Healthy Fun Food' along with exercise and activity tips. Our team will make sure that this exchange is pleasurable, focused and invigorating and will have an underlying tone that will promote vibrancy, safer living conditions and greater peace of mind.

## ● Our Launch and Team

As mentioned above, this venture has just passed its two-year mark and we will be going to market on the 10th January 2021, with a B2B and B2C product set. We had a clear business imperative prior to the COVID contagion but following the onset of this dilemma and the ongoing nature of this pandemic, the need for these solutions has become even more apparent. As we launch our B2C (Liberate) and B2B (Embrace) platforms, take a good look at these solutions and see how they will address many of your valid fears and concerns.

Whilst we are just starting this journey we begin with a seasoned and very experienced leadership team that already comprises of 6 different nationalities. Our business is fully inclusive and a firm believer in equal opportunity and diversity.
